

We Don't Manufacture the Cheapest Sewer Pipe *...And You'll Be Glad.*

Prime Conduit™

It's a good bet that when specifying sewer pipe, many think only of the short term expenses and don't consider the long term qualities of the pipe. As a result, they eventually have to deal with costly repair and maintenance problems such as infiltration, joint leakage and corrosion.

They forget to ask: "Who manufactures a 'zero-leakage' pipe for the life of the system?" "Who manufactures a pipe that installs easily?" "Who can we count on for service?" "Who will give us the most value for our dollar?"

The answer is Prime Conduit™ and Vylon, a large diameter closed profile gravity sewer pipe. Manufactured in 21" through 54" diameters, Vylon is ideal for most large diameter piping applications such as sanitary sewers, storm, outfall and industrial applications, sliplining, micro-tunneling, bridge column forming, direct bury and tunnel carrier pipes.

Quality controlled production processes and product tests assure consistent, high quality pipe that fully comply with ASTM standards. To include Vylon in your specifications, simply require a closed profile pipe that is produced in accordance with ASTM F-1803.
